1.Driving Licence Eligibility

```
class demo
{
public static void main(String[] args){
int age=19;
String licence=(age>18)?"eligible":"not eligible";
System.out.println(licence);
}
}
```

2.Even number and Range Checker

```
class hello_world {
public static void main(String[] args) {
int num=24;
if(num%2==0&&num>10)
{
   System.out.println("the number is even and greater than 10");
}
else{
   System.out.println("the number is not even and smaller than 10");
}
}
}
```

3.Student pass checker

```
class hello_world {
public static void main(String[] args) {
   int mark=89;
   int attendance=78;
   if(mark>=40&&attendance>=75)
   {
      System.out.println("pass");
   }
   else{
      System.out.println("fail");
   }
}
}
```

4.Shopping discount eligibility

```
class hello_world{
   public static void main(String[] args){
      int amount=1500;
      String member="premium member";
      if(amount>=2000&&member.equals("premium member”))  {
       System.out.println("discount available”)   }
      else{
       System.out.println("no discount");
      }
      }
      }
```

5.Smart battery charging

```
class hello_world {
public static void main(String[] args) {
   int battery=85;
   int temperature=36;
   Boolean charging=(battery<90&&temperature>=10 &&temperature<=45);
   battery=charging?battery+5:battery;
   System.out.println(charging);
   }
    }
```

6.Online order free delivery

```
 class hello_world{
public static void main(String[] args) {
int amount=500;
String member="not premium";
 if(amount>=1000||member.equals("premium"))
 {
    System.out.println("free delivery");
 }
 else{
    amount+=50;
    System.out.println("delivery charge Rs.50");
 }
 }
}
```

7.Smart Exam registration system

```
class hello_world {
public static void main(String[] args) {
int attendance = 56;
boolean medical = true;
boolean fees = false;
boolean assignment = false;
boolean eligible = (attendance >= 75 || (attendance >= 65 && medical)) && fees &&
  assignment;
String accepted = eligible ? "successful" : "rejected";
System.out.println(accepted);
  }
}
```

8.Remove the last digit

```
  class hello_world {
  public static void main(String[] args) {
    int a=3456;
    int b=a/10;
    System.out.println(b);
  }
}
```

9.A number is divisible by both 3 and 5

```
 class hello_world {
    public static void main(String[] args) {
    Scanner sc=new Scanner(System.in);
```

```
        int num=sc.nextInt();
        if(num%3==0&&num%5==0)
        {
           System.out.println("divisible");
        }
        else{
           System.out.println("not divisible");
        }
        }
        }
```

10.Even or odd

```
import java.util.Scanner;
class hello_world {
    public static void main(String[] args) {
        Scanner sc=new Scanner(System.in);
        int num=sc.nextInt();
        if(num%2==0)
        {
           System.out.println("even");
        }
        else{
           System.out.println("odd");
        }
}
}
```
